General Notes:

This week saw temperatures drop back down to more seasonable low -30's, and a noticeable reduction in daylight hours with our transition to "Daylight saving" time. There was a planned station power outage on 2020-10-20 to allow the mechanics to do some maintenance on the generator, the outage lasted 10 minutes and all instruments on UPS were unaffected. Otherwise it was a quiet week, featuring some drift and cable maintenance around the MSF and a successful MMCR reboot. The 'lost connection' issues with data transfer to Boulder have resolved.
